EDUCATION

National Institute of Technology, Durgapur

B.Tech in Computer Science and Engineering (CGPA 8.05)

Durgapur, West Bengal

Nov. 2022 – May 2026

TECHNICAL SKILLS

Languages: Java, C/C++, Python

Frameworks: Spring Boot, Langgraph, Langchain

Developer Tools: Git, Docker, RabbitMQ

Databases: MongoDB, PostgreSQL, Redis, ChromaDB

EXPERIENCE

Oracle India Pvt Ltd.

Jan. 2026 – Jul. 2026

Project Intern

- Engineered a multi-agent AI workflow utilizing LangGraph and Python to automate the triage of codebase vulnerabilities, delivering a proof-of-concept that dynamically generates dependency patch recommendations
- Developed an automated vulnerability mitigation pipeline in Python, successfully resolving critical dependency conflicts and streamlining the manual security audit process.
- Integrated a Personally Identifiable Information (PII) masking mechanism in Python to sanitize sensitive data streams, enforcing strict data privacy compliance across backend environments.

PROJECTS

Microservice based Quiz Platform

Spring Boot, Spring Cloud, WebSockets, RabbitMQ, Redis, MongoDB, ReactJS

[Github Link](#)

- Engineered a real-time multiplayer quiz application using Spring Boot, Spring Cloud, Netflix Eureka, and RabbitMQ, orchestrating 6 microservices with service discovery.
- Engineered WebSocket-based communication and event-driven workflows to handle concurrent users, leveraging Redis caching and Pub/Sub for sub-second response times and efficient quiz session management
- Implemented JWT authentication with a custom API Gateway filter, securing all of client-to-service traffic, integrated with dedicated Auth and User services
- Developed a ReactJS front end with live quiz updates, and designed a highly responsive leaderboard service utilizing RabbitMQ and Redis caching to ensure sub-second latency for real-time vote processing

P2P File Sharing System

C++, Socket Programming, Semaphores, Linux

[Github Link](#)

- Built a file-sharing system in C++, enabling peer-to-peer file transfer via 1024-byte chunking from other nodes on the network using TCP connection, coordinated by a tracking server
- Implemented multi-threading to handle concurrent file transfers among nodes, achieving 4 times faster retrieval compared to sequential requests
- Synchronized semaphores on the nodes to avoid race conditions on threads handling file requests and sending file chunks

ACHIEVEMENTS

- Solved 1000+ questions on [LeetCode](#) and [Codeforces](#)
- Secured All India Rank of 4893 (99.46 percentile) in JEE Mains 2022
- Secured GMR rank of 335 in WBJEE 2022
